

Finnish Clinical Biobank Tampere

26.1.2022

Enni Makkonen, Service Coordinator

Research possibilities with Finnish Clinical Biobank Tampere (FCBT)

- **Samples:**
 - Blood samples (serum, plasma, DNA/whole blood) from appr. 44 000 individuals who have given a biobank consent
 - Fresh frozen cancer tissue samples from appr. 670 individuals and ctDNA samples from appr. 1300 individuals
 - 3,4 million old diagnostical tissue samples from appr. 400 000 individuals whose diagnostic samples have been transferred to FCBT
- **Data:**
 - Clinical data related to the samples (EHR data)
 - Data from previous biobank research projects, such as **genome data**
- **Patients:**
 - Possibility to recontact consent given individuals who have agreed to be recontacted

Recall studies

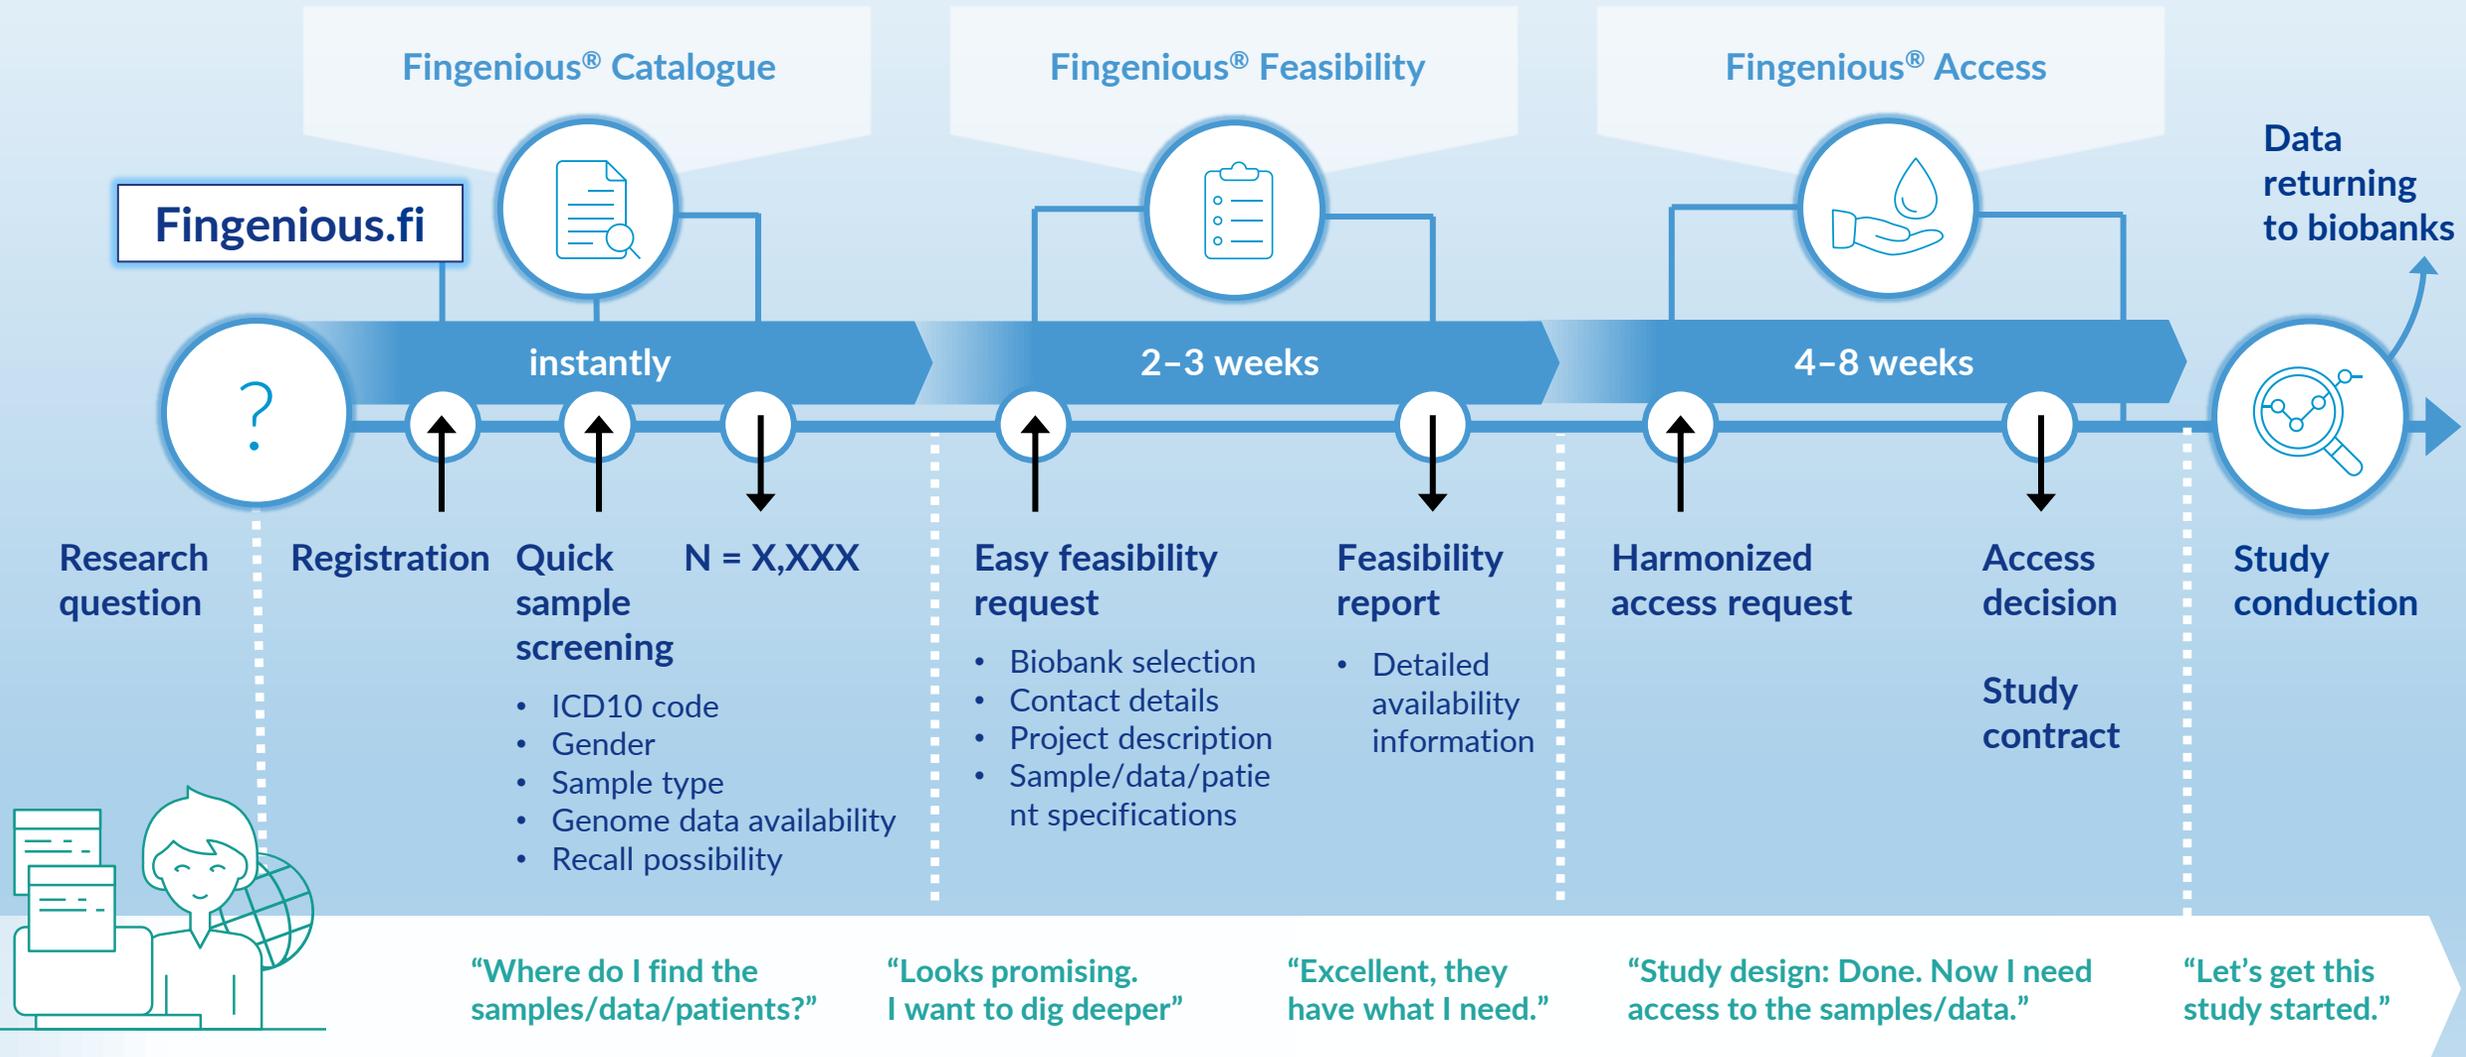

New and efficient way to recruit research subjects for clinical studies

- 90% of people volunteer to be recontacted for study purposes when giving their biobank consent
- Study subjects can be chosen by any criteria within the biobank and hospital data registries:
 - ICD10, age, medical treatment, genome data, ...
- Recall studies can be e.g. filling out questionnaires, taking tests or giving new samples
- Inviting research subjects to participate in recall studies can be carried out electronically through the hospital's online portal

Remember also our
service package
designed together
with HeAT Lab

How to apply?
